Attack Alarm Infra-red Patient Call Fob (Transmitter)

Issue 2 (04/2021) -

Overview

This patient fob can be used as part of a standalone call solution, or as a fully integrated part of a Static Systems' Ultima™ and Codemlon™ nurse call system.

A large call button, prominently placed on the device makes activation easy, with instant transmission of the unique alarm signal.

When activated the device remains attached to the patient; continuing to track their location should they move from the original call initiation point.

Alongside indication at a staff indicator, radio pagers and smart devices can be used to alert mobile staff to the call.

Resetting the call is achieved using either a mobile 'reset' device, or a switch at the staff indicator.

The system registers and cancels each signal individually and displays multiple calls in the order they are received.

To facilitate best practice, 'zoning' can be incorporated to ensure only local calls are raised.

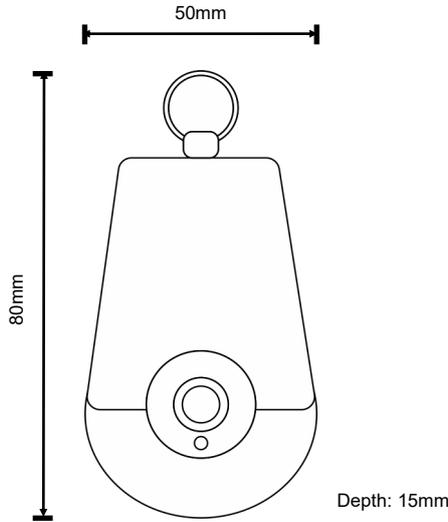

Systems can incorporate data recording and archiving for future analysis and reporting purposes.

Facilities and Features

- Fob stays attached to user after activation:
 - Continual tracking once activated to give real-time location identification
- Event logging and data analysis (optional)
- Follow-the-light (optional)
- 'Zoning' operational mode (optional)
- Robust, fit-for-purpose design

Dimensions

Specification

System: Ultima™ Attack Alarm
Codemlon™ Attack Alarm
Part of the Fusion-IP family

Connectivity: Infra-red

Power: A23 12V Alkaline Battery (supplied)

Weight: 51 grams

Fixing: Various clips and tags

Method: Belt clip provided as standard

Enclosure: ABS Plastic

Finish: Fine spark textured, black

This product can be used with the following system(s):

- Ultima**
- Codemlon**
- Aspire SmartSync** (standalone)

Where Care Meets Tech

Heath Mill Road, Wombourne, Staffordshire, WV5 8AN, UK
