

## Observations and call rounding:

Enhancing patient-centric care

Studies have demonstrated that the incorporation of hourly rounding protocols into clinical practice is an effective evidence-based intervention.

Taking the concept a stage further, it is possible to go beyond attending to the established 4 P's: Pain, Potty, Positioning, and Periphery. With advanced nurse call systems, patient specific nursing interventions can be carried out at carefully chosen time intervals.

Room Information Displays (RDIs) with pre-programmed, touch-screen buttons are installed within patient rooms.

Using the functionality provided, staff select rounding frequency and required activities.

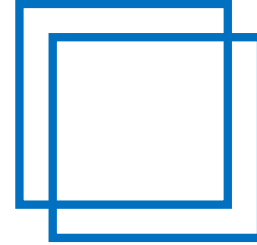

At the appropriate time automated observation reminders are sent to mobile devices carried by pre-selected personnel. Simultaneously, and as a constant reminder, an over door light outside the patient's room will illuminate until the patient has been attended to.

## At a glance:

- Enhanced features:
  - Automatic system updating in real-time, following staff attendance using RTLS tracking.
  - Static Systems' MIMic app can extend the available features.
  - Observations and call rounding can be incorporated as a fully integral part of an advanced nurse call system.

## Core Outcomes

- Offers patient-centric care.
- Proactively addresses patient needs; helping to safeguard patient safety, decrease the occurrence of preventable adverse events, leading to a reduction in risk.
