

Staff real-time location :

Improving workflow efficiency

Adding accurate location information to a department's nurse call system is an extremely effective way to enhance communication capabilities for staff, achieve faster response times for patients and enable a more hands-free approach to patient care.

At a glance:

The interoperability of Static Systems' nurse call solutions and CenTrak's Real-Time Location System (RTLS) technology automates staff locating and event handling, allowing caregivers to focus more time on the patient.

Administrators also benefit from the extensive data that is collected for reporting and analysis. With this information, healthcare facilities can better examine how care is delivered and identify new ways to improve processes.

- Clinicians wear a battery operated tag which transmits a signal to receiver units.
- Clinical events are automatically generated and recorded as staff move around their environment.
- Time-stamped staff presence, response times and length of visit.
- Reports are available for viewing on screen and downloading.
- Automatic illumination of over door lights for staff presence.
- Automatic call cancellation.
- Facilitates call rounding.

Core Outcomes

- Improves workflow, staff efficiency and safety.
- Facilitates routing of the right task to the right person at the right time.
- Proactively addresses patient need, helping to safeguard patient safety and reducing risk.
- Increases patient and staff satisfaction.
- Facilitates staff rounding, and provides a more patient-centric environment.
- Generates patient and staff interaction reports, including response times and length of visit by staff in attendance.
- Quality, real-time information to help with planning and improving patient care.
