

Better communication, collaboration and productivity:

Keeping patients safe, Empowering care teams,
Creating smarter hospitals

The Fusion Healthcare Platform® is an infrastructure that seamlessly brings together best-in-class healthcare alarm and communication solutions to make a real difference to the day-to-day running of hospitals and other healthcare environments.

It goes without saying that the platform works harmoniously with Static Systems' extensive product portfolio. And, because of its platform independent nature, it can also work with third-party systems, security and management networks.

The Fusion Healthcare Platform® is being used extensively in some of the world's busiest and most demanding environments. It's designed to meet the demands of today, with an eye on the requirements of tomorrow.

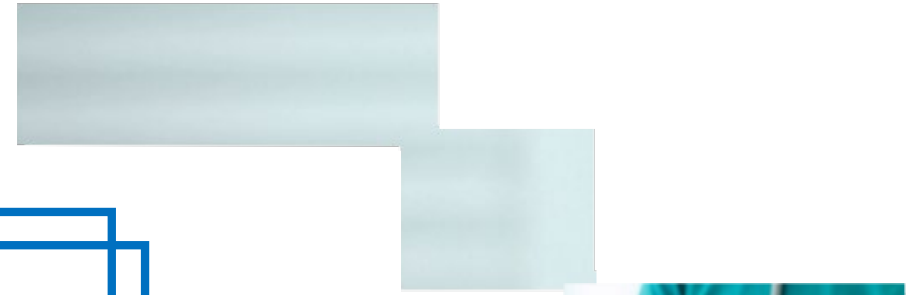

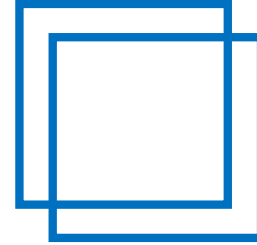

At a glance:

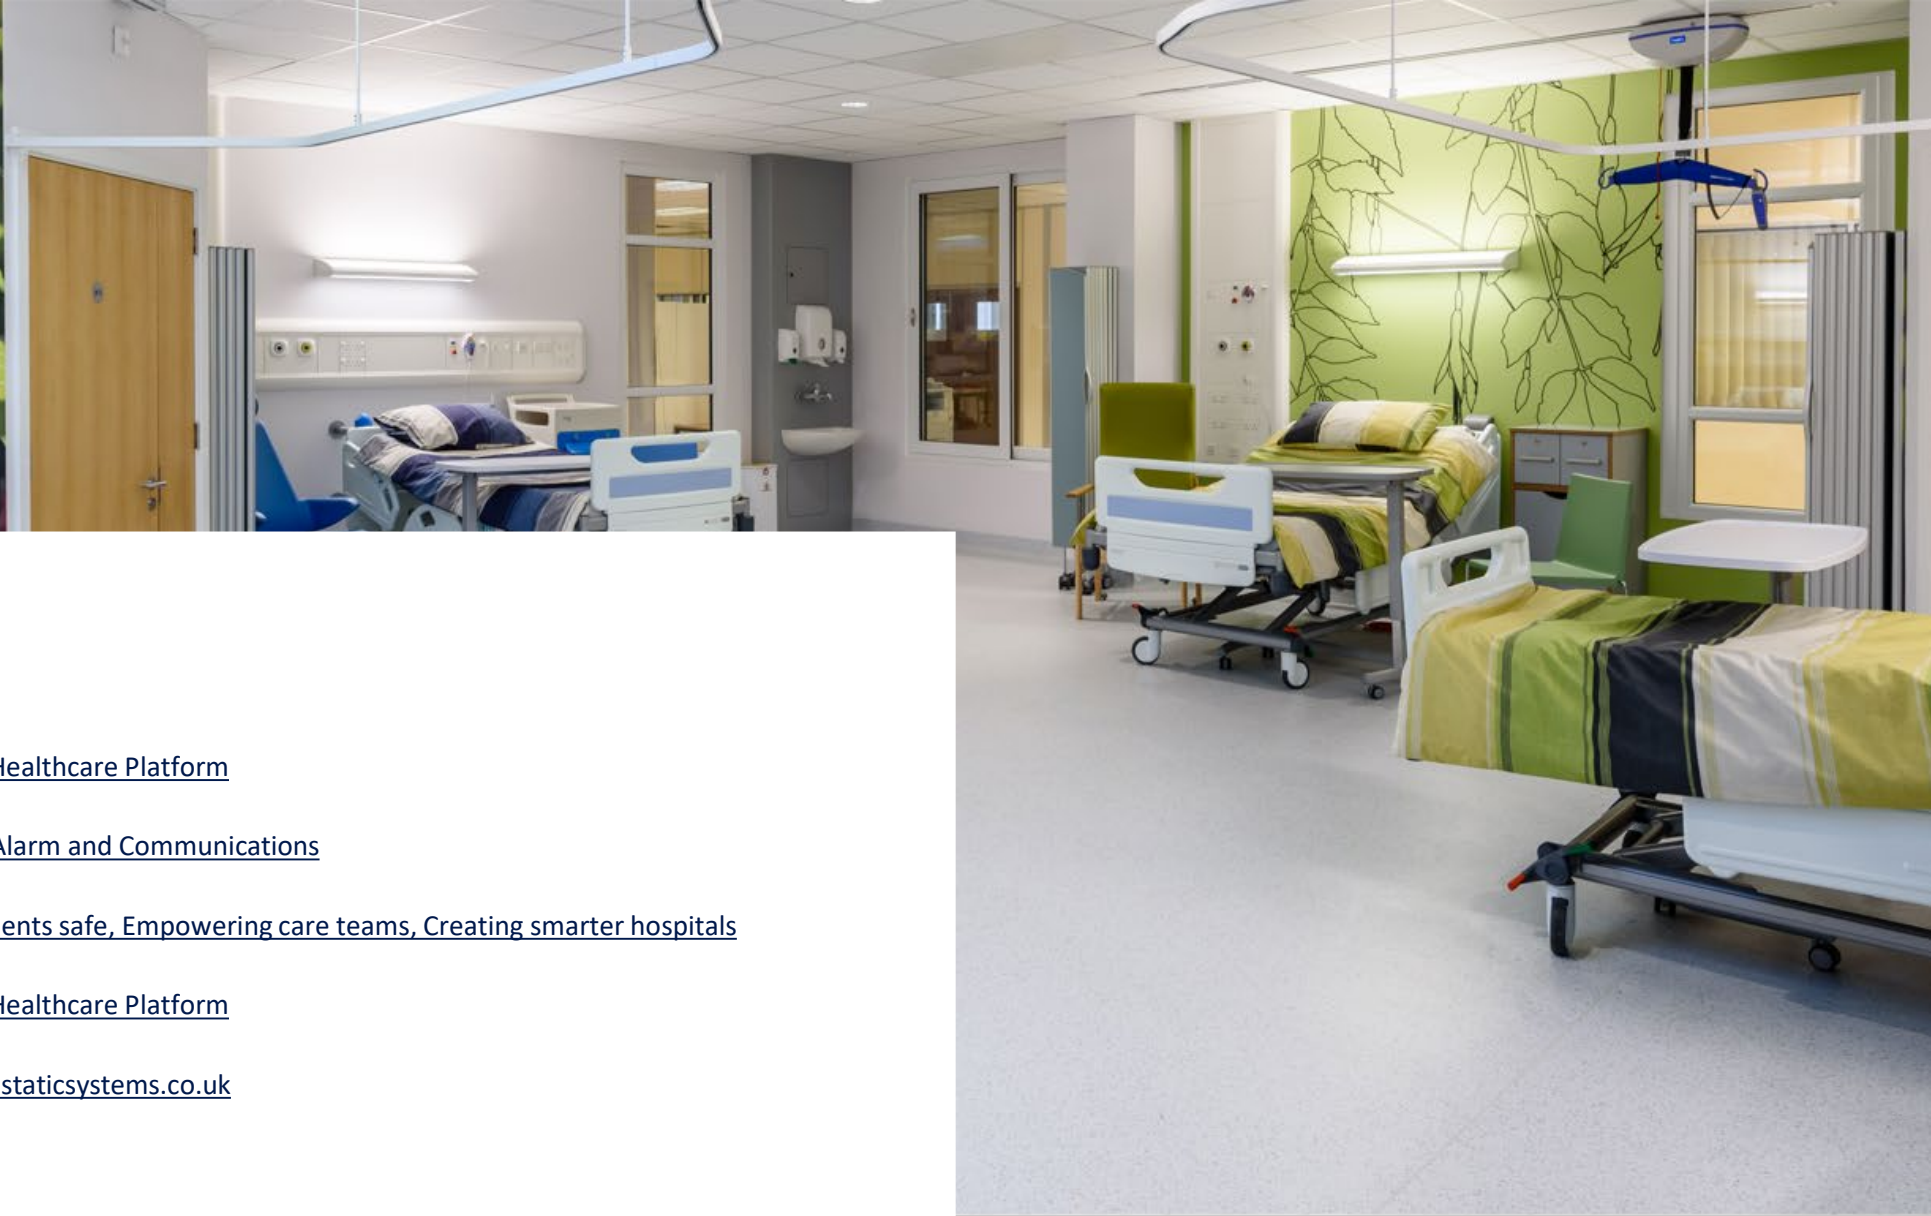

- Alerts and alarms from systems and devices in the clinical space are processed by an intelligent rules based engine ensuring that all events receive an instant response or action.
- Events from one system can be processed in conjunction with information from another to intelligently enhance an alarm, alert or workflow.
- Alerts are delivered directly to the right people, at the right time, on the right device.
- Automatic or user selectable actions can be performed directly from the device whether it be a direct speech conversation with a patient, other care team member, or an escalation to an alternative event or workflow.

Core Outcomes

- Brings an entire care team together seamlessly around the patient.
- Secure messaging and collaboration between care teams.
- Delivers an excellent patient experience.
- Improved staff well-being.
- Scalable and flexible solution.
- Audit trail for every event including speech conversations.
- Advanced analytics allows for detailed management of response times, actions and workflows.
- Automatic reports and statistics generated for information such as operational efficiency and KPI management.
- Patient Experience Reports.
- Effectively manages claims and litigation.
- Informed clinical decision making, unified data from multiple sources at one time including EMR, clinical and operational systems and medical devices.
