

Advanced nurse call:

Let technology take the strain

Fundamentally, nurse call is about supporting patient care and helping to deliver good outcomes.

Our solutions deliver multidisciplined, ward and site-wide life-critical communication. Helping staff to meet the challenges of today's busy acute healthcare environment- with an eye on the requirements of tomorrow.

Our solutions are designed to be flexible with a range of features to support staff in attending to patients in the shortest possible time, while helping with workload management.

At a glance:

- **VoIP speech** - including speech as part of the nurse call solution allows staff to assess the nature of a patient call and act accordingly without first attending the bedside.

Where required patients can be allocated to specific care teams, and speech can also be used to assist with calls to support teams such as hospitality.
- **Smart device notification**- for staff convenience, alarm calls present on the system can be displayed on smart devices such as mobile phones and tablets. Patients can be allocated to specific care teams.
- **Follow-the-light** – upon activation of a call unit, lights strategically placed along corridors and above doorways automatically illuminate to indicate the most direct route to the waiting patient.
- **User-defined calls**– in addition to the more usual types of call such as 'patient', 'emergency', 'cardiac' and 'toilet', systems can accommodate user defined levels of call.

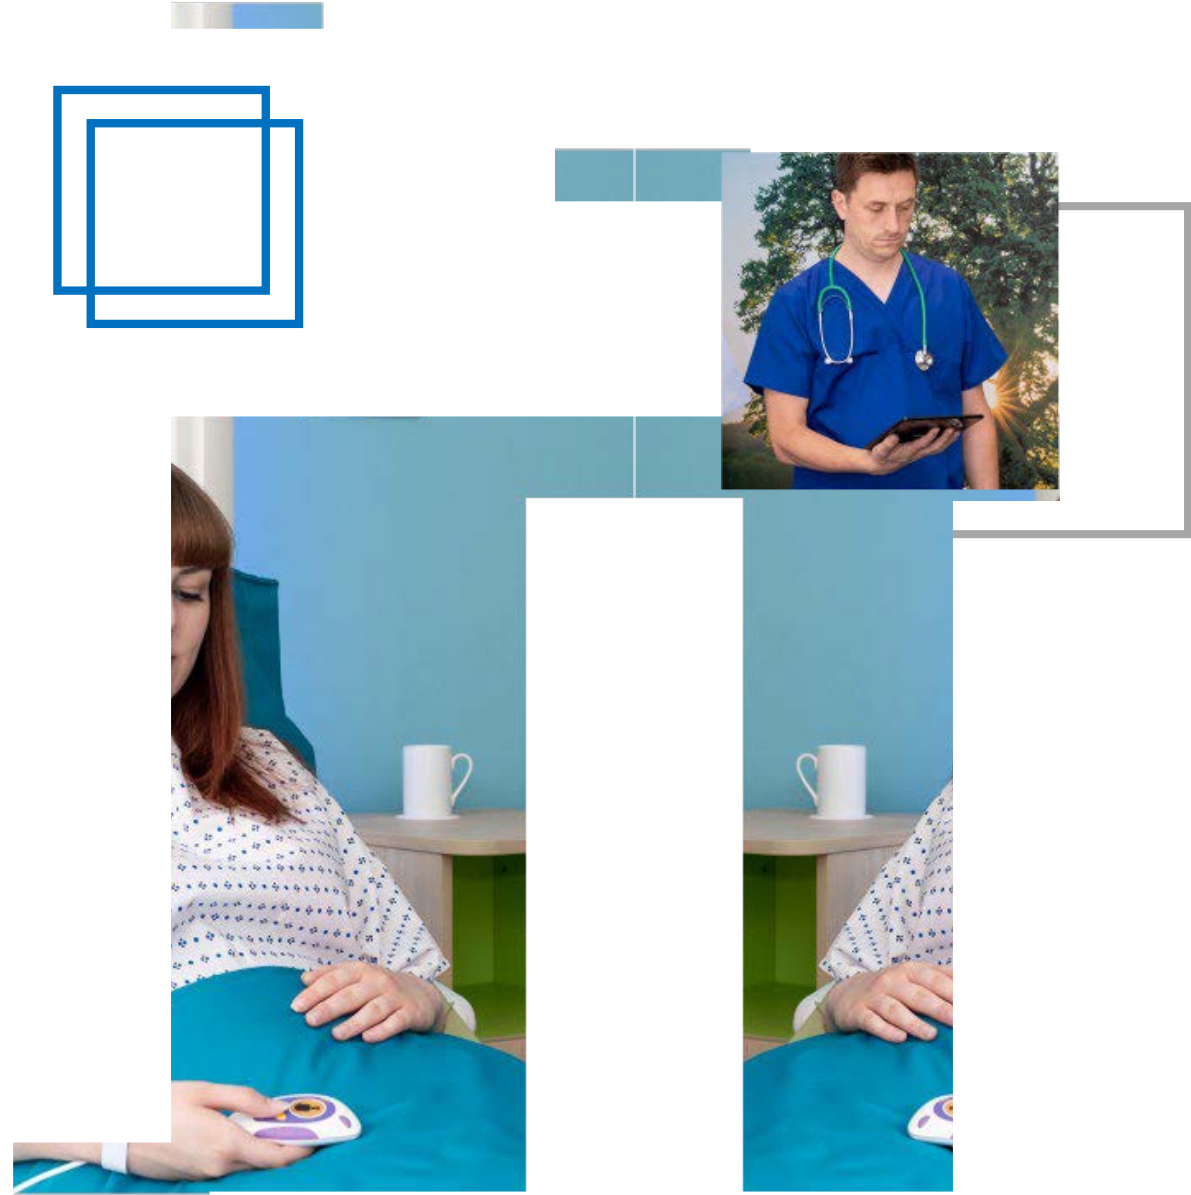

• **Nurse presence** - activated either automatically as staff move around the hospital or by manual operation of wall mounted switches. The exact location of hospital personnel is known enabling the nearest available member of staff to be re-directed to a waiting patient.

Nurse Presence is often used in conjunction with speech and over door lights

- **System collaboration**– our nurse call systems offer more than a patient call button to attract the attention of staff. They are flexible ward management solutions, designed to assist with and enhance modern nursing practices. An extensive list of optional, [advanced features](#) can be incorporated.

Core Outcomes

- Better patient care .
- Improved patient safety.
- Improved staff safety and well-being.
- Enriched patient experience.
- Optimized workflow efficiency.
- More dynamic communication.
- Better engineer support.
