|---|---|
| **Description** | The Large LED Display Interface allows for the connection of a large LED display unit onto the Acelo Nurse Call System.<br><br>Typically positioned on the wall or ceiling, the interface will be located next to the Large LED Display to allow the active event information to be clearly displayed. |
| **Part No.** | 200062 |

| Product | Acelo System Monitor |
|---|---|
| **Description** | Each system requires one of these units for health checks at system level. The System Monitor electronics module health checks and controls the transfer of events from IP nodes on its own subnet. When the transfer of calls is activated the System Monitor receives a broadcast message from the ward and sends an individual unicast message to other system monitors on different subnets to initiate the call transfer. This device is suitable for wall mounting only tand does not need to be accessed by any staff (there is no screen on this unit). The unit requires an IP PoE data connection, it is powered via PoE from the data network. |
| **Part No.** | 200035 |

| Product | Acelo Zone Controller Unit |
|---|---|
| **Description** | Local Bus Zone Controller has been designed to meet the specific needs of certain areas where IP speech devices are not required. This unit can connect up to 15 local bus call point devices with a maximum of 3 Room Status Lights. Four different Local Bus Runs are available. This device is suitable for wall mounting only and does not need to be accessed by any staff (there is no screen on this unit). The unit requires an IP PoE data connection, it is powered via PoE from the data network. |
| **Part No.** | 200034 |

| Product | Acelo Nurse Station Console Speech Handset |
|---|---|
| **Description** | Speech handset and connecting lead.<br><br>Available as a spare part only. |
| **Part No.** | 200036 |

| Product | 24 Port POE IP Switch, 24-Way IP Switch |
|---|---|
| **Description** | Industry standard 24-Way PoE IP switch unit.<br>Such as the Netgear GS728TPv2.<br><br>The 24-Way PoE IP switch will form part of the data network required for Acelo nurse call systems.<br><br>This item requires 230v AC mains power ideally via a UPS device. |
| **Part No.** | 101072 |

| Product | Router |
|---|---|
| **Description** | The 24 port router allows for multiple nurse call systems to be networked and calls to be repeated between these areas.<br><br>One is required per site (per data network)<br><br>The router also allows for servers to be connected to the network and additional features can be utilised. |
| **Part No.** | 100896 |

| Product | Speech SIP Server |
|---|---|
| **Description** | The SIP server is designed to enable multi-channel VoIP speech.<br><br>The SIP server is provided complete with software suitable for use with the Acelo nurse call system. This item requires 230v AC mains power ideally via a UPS device. |
| **Part No.** | 100246 |

| Product | Control Unit Fusion-IP Logging Server |
|---|---|
| **Description** | Fusion-IP logging server is suitable for use with the Acelo nurse call system. Provides and stores details of nurse call system event logs via the nurse call network. |
| | This item requires 230v AC mains power ideally via a UPS device. |
| **Part No.** | 74833 |

| Product | Messaging Server |
|---|---|
| **Description** | The messaging server will be connected onto the Acelo nurse call network and provide messaging from the Acelo nurse call system onto other devices or PCs. |
| | This item requires 230v AC mains power ideally via a UPS device. |
| **Part No.** | 100245 |
